

Best Practice Summary

1. Define a sequencing project as you would any other.
2. Unknown applications should always be quoted on a time basis.
3. Review the application.
4. Test/capture native install.
5. Make native install work without CDROM.
6. Smoke-test native install.
7. Make a draft recipe during native install.
8. Always include SoftLaunch4 in the package.
9. Copy to CWD to solve file-not-found issues.
10. Sequence using the recipe. Update as you go.
11. Consider box assets for delivery.
